

CERTIFIED SECURITY PRINCIPLES

a. Course Overview

The redefinition of the world of work and business which is now characterised by remote working/working from home, online conference meetings, e-commerce, online education, among others in efforts to reduce physical interactions because of Covid-19, have impacted on the increasing cases of cyber-attacks targeting users of computer systems.

The Certified Security Principles Training is an international non-technical certification programme which provides universally acceptable standards and practices to ensure security of digital assets that bother on end users and employees. It will provide practical skills needed in applying and implementing user knowledge of security concepts and controls to ensure the *Confidentiality, Integrity & Availability* of data.

Participants who complete this training will not only have a full understanding of cybersecurity ethics and skills to become valuable assets in their workplaces but will have set the pace for a cybersecurity career path.

b. Course Contents

The course will cover the following training modules:

1. Introduction to IT Security	6. Application Security for Non-Developers
2. Risk Management	7. Managing Server/Host Security
3. Understanding of Cryptography	8. Understanding Mobile Device Security (IoT)
4. Understanding Identity and Access Management	9. Managing Day to Day Security
5. Managing Data Security	10. Understating Compliance and Auditing

c. Target Participants
